A: In case your file is written in UTF-8,
you can check with this: if (Base64Encode

`(Convert.FromBase64String("Nw==")) == Base64Encode(Convert.FromBase64String("Ng=="))` If both Base64-encode strings are equal, then it is safe to assume the contents are the same. The file you are downloading is a valid PDF file, so it should be pretty safe to assume it's OK (since in general, you can never be 100% sure about any file you download). A polarizing beam splitter (PBS) is an optical component often used in a projection system for optical imaging. The PBS separates the polarization state of the incident light by creating a particular linear polarization state (P- or S-state). There are two orthogonal linear polarization states, P and S, which are useful for displaying images with correct contrast and color.

Most high-brightness projectors utilize circular polarizers to separate the image light into P and S polarization states. In a single PBS ba244e880a
