Simulate the location of your device on a map, according to your movement, with this app. Use it to visit places, or to simply show your location on the map. Updated with the Android 2.2, this new version of KeyMacro will enable you to see and manage your movements and use it as a guide to visit places. The app will let you control it in 3 modes: • "walk," simulates a pedestrian walking on the road • "drive," simulates a vehicle driving • "fly," simulates an aircraft or drone Use the "movement" menu to select the movement speed Choose between different location points: • your home • the closest location point • a known location (for example, a meeting point) • any point on the map Change and add multiple location points Change the location, right from the map Multiple simultaneous movements See your movements on a map Display a single point on the map Integrate the app with 3rd party apps Set the location of the vehicle, through Google maps Map an area: • set the destination • set the duration • set the elapsed time • set the location • set the speed • set the orientation • specify the interval between stops • repeat a trip Share your location with others Print out a map with your movements See the previous destinations The app works offline Compatibility with the Android 2.2, 2.1, 2.0 and 1.5 Simulates location by various methods (Including walking, driving, riding or flying) Visits places you define (and show your position) Allows you to navigate your movements (For example, to visit a certain place) Allows you to move your position Allows you to move your position Allows you to share your position with others Allows you to see your position on a map Allows you to control your vehicle (for example, an airplane or a drone) Allows you to move your location Allows you to set the direction Allows you to set the speed Allows you to set the elapsed time Allows you to set the interval between stops Allows you to change the location you visit Allows you to change the destination point (and change the duration) Allows you to set the position of the destination point Allows you to see the previous destinations Allows you to choose a point on 70238732e0
