Wycliffe College is an Evangelical Christian college in Toronto, Canada. The college was founded in 1824 and is one of the oldest colleges in Canada. The college has been producing Bible-based teachers, preachers, and missionaries since its founding. As such, the college is a leader in the effort to provide Christian education to students in the Christian field. The Wycliffe College Online Learning Platform is used to support the Learning Management system used by the College to facilitate student attendance, testing, courses, and assignments. The college uses the Learning Management System to track academic progress of students, progress in assignments, and assessment tests. Students are given certificates of completion when they complete each course. This is a video that teaches you what the ethics behind the way Wycliffe College treats its students when it comes to the use of the Internet for personal purposes. The video clearly outlines the college's policy against the use of personal computers in the classroom. Mobile Protocols: How To's & Wireshark A Tour Description: The Internet Protocol (IP) is the basic protocol which is used to allow data to be transmitted over the Internet. Many different layers of protocols are used to get data to its destination, the simplest of which is TCP/IP (Transmission Control Protocol/Internet Protocol). This video demonstrates how the different layers of the Internet protocol work and how they can be viewed using the Wireshark tool. In addition, the video demonstrates how to decode the traffic of a mobile telephone using Wireshark. This tutorial demonstrates how to use Wireshark to decode traffic using various protocols, including the session initiation protocol (SIP), the media gateway control protocol (MGCP), the message transfer part (MTP), the session description protocol (SDP), and the simple mail transfer protocol (SMTP). The video also demonstrates how to decode traffic from a mobile phone using Wireshark, including how to decode the media sublayer of GSM, how to decode SIP packets, and how to decode MMS. To demonstrate how to decode traffic using Wireshark, the video first shows how to set up a router that allows traffic to flow from the Internet to the LAN of the host computer. Then the video demonstrates how to run Wireshark, and how to set up the host computer's TCP/IP configuration to allow packet capture to occur. It also shows how to configure the Wireshark capture filter to only capture packets to and from the telephone 76496c80cc
