

A: You have an `.li`. Now, whenever something is added as the last item in the list, the CSS is going to select that and then the CSS is going to apply to the previous `.li`. So, if you added the last item, because the two previous `.li` aren't the last item, the bullet won't appear. To fix, remove the last element (the span with red text) from the document. Note that you are not missing any padding or margin: `.li { display: inline-block; padding: 0.5em; margin: 0.5em; margin-bottom: 0.5em; } .li.last { margin-right: 0.5em; margin-left: 0.5em; }` `.li.last img { float: right; }` Oxford ingilizce turkce sözlüklere yönelik yapılan işlemler Oxford ingilizce turkce sozluk sözlükleri Oxford ingilizce turkce sözlükleri Oxford ingilizce turkce sözlükleri Q: How can I remove my word from a list in Python? I would like remove my words from a list of words. I tried `word = ['blue','red','yellow','green']` for `i` in `word`: if `i == 'blue': word.remove(i)` print word and it prints: `['red',`
