
KEYMACRO is a simple and useful macro recording tool for automating repetitive tasks. It can automatically perform many actions on your keyboard. Features: Keyboard macros can be programmed by repeating a sequence of keystrokes with no key clicks. The macros can then be recorded by pressing a recording key or a series of keys, which automatically repeats the sequence of keystrokes. The recorded macros can be triggered at a later time by pressing one of the macros keys (the trigger keys). A keyboard logger can be used to log all keyboard commands that are executed by the macros. Keyboard macros can be shared with other KeyMACRO users by saving them in their personal macros file. Save macros, reset your macros, and other functions are available through the Preferences window. Keyboard macros are available for several languages. KEYMACRO can be used to record and playback keyboard macros in English, Chinese (Simplified), Chinese (Traditional), French, German, Italian, Japanese, Korean, Polish, Russian, Spanish, and Vietnamese. Troubleshooting: Symptoms: Symptoms: Symptoms: Key sequence non-functional Symptoms: You may be unable to use the key sequences recorded in your macro. Symptoms: Key sequence does not work in all applications Symptoms: You may be able to use the macros in some applications and not in others. Symptoms: Some macros keys do not work. Symptoms: Some keys that should work do not work. Symptoms: Key sequence errors Symptoms: When you perform a key sequence, you may get an error message in some applications. Symptoms: You may get the same error message repeatedly. Troubleshooting: Symptoms: Symptoms: Symptoms: Keyboard sequence does not work Symptoms: Macro does not work when you try to run it Symptoms: Key macro is broken Symptoms: Keymacro cannot record the macros Symptoms: Symbol cannot be displayed Symptoms: Symbol not displayed properly Symptoms: Operation canceled Symptoms: Operation did not finish Symptoms: Errors were encountered in opening the output file. Symptoms: Errors occurred during saving the file. Symptoms: Unable to cc6f4944dd
