Q: Using Powershell to access an Active Directory Server from a standalone computer? I'm trying to programatically access a remote Active Directory server from a standalone workstation. I'm sure this is a simple question, but I have no idea where to start. The workstation is just a regular Windows 7 machine running nothing more than a standard PowerShell console. I have full control of the machine and can do anything I want with it.

A: You can use the Active Directory module. You can do remote PowerShell with remoting.

Effect of aldehydic oxidation on the structural stability of wheat flour proteins. The effect of low pH and pH on the structural stability of gluten proteins was investigated by differential scanning calorimetry and microscopic techniques. The formation of amino acid Schiff base, the cross-linking among protein molecules and the aggregation of insoluble particles induced by the aldehydic oxidation were studied during storage of gluten proteins at different pH and different temperature. Our results show that low pH significantly affects the structural stability of wheat flour proteins and it modifies the aggregation of insoluble particles that form during the heat-induced aggregation of wheat gluten. The aggregation of insoluble particles is more relevant at pH 4.0 than at pH 3.0. The effects of pH and temperature on the aggregation of insoluble particles are different, probably due to 2d92ce491b
