Posttraumatic stress disorder (PTSD) among women who were survivors of domestic violence was examined in a community sample of women (N = 289). A high prevalence of PTSD was found among the sample as a whole and in each of three diagnostic subgroups: those who had ever been abused by a partner (n = 96), those who had been abused by a current partner (n = 103), and those who had been abused by anyone (n = 87). In each of the three diagnostic subgroups, we examined the contribution of specific life stressors to PTSD, as well as the contribution of cumulative risk to PTSD. We found that both single and multiple life stressors were related to PTSD in the various groups. Implications of these findings for treatment of PTSD in women who have experienced domestic violence are discussed.Q: How to use PhoneNumberUtils.setDefaultCountry for the phone number of a network operator I have added a line in the manifest to request the following permission: I got that line from other questions asked here, and I got the code to check if the phone is activated from this site. When I get the phone number from a dialer, I have the network operator's name in the log. However, when I use the code below to set the default country using the phone number obtained from the dialer, it always return null. PhoneNumberUtils.setDefaultCountry(this, "in", "+14155555555"); I don't have the check from that link to know if the phone is activated or not, but it's not important since the code below always returns null. String operator = null; String number = getContext().getResources().getString(R.string.phone_default_country); operator = PhoneNumberUtils.getNetworkOperator(number); I have the following in the manifest 2d92ce491b
