Field of the Invention The present invention relates to an electrical wiring terminal, and more particularly, to an electrical wiring terminal for a high density, multiple pad type wiring board with improved reliability of insulation reliability of the wiring terminal. 2. Description of the Related Art Recently, as electronic devices become increasingly sophisticated and miniaturized, and are required to become lighter and smaller, wiring boards used for the electronic devices are required to be thin. In response to the thinning of the wiring boards, there is a need for a wiring board with more pads than conventional wiring boards. In order to meet this need, there is a need for an electrical wiring terminal that has a plurality of wiring terminals connected to the pads of a wiring board. In the case of a conventional electrical wiring terminal, the welding of a conductive wire
