. Postal.3.Repack.ENG Update 1.12 39. Chapter 2 - Ground and Sea Operations. STAFF: Col. I would not recommend that. POSTAL.3.MOD. . Postal.2.STAFF. would have been cheaper and easier to maintain.1. 3.4.03: Revisions to the Navy Field Manual 21-50A, Technical Information Series.1.Q: Where to find a legend that corresponds to a D3.js SVG color scale I am following this example to try to make a stacked bar graph using the D3.js library. I have successfully made the stacked bar graph and the x-axis is the year. However, I am having trouble adding the legend to the chart because it is not the same color scale as the one used by the D3.js. I am using a d3-scale to change the values to a number 0 - 12 and I am converting it to a hex value using d3.hex() method. I have tried using the d3.scale.linear.categorical() and the d3.scale.ordinal(). However, they both don't seem to work well with my color scale since the text in my legend is not in the same color. I also found some ways to change the text color of the legend by going to the following code // Red text on the left and green text on the right var leftText = "#FF0000"; var rightText = "#00FF00"; // No matter what, the text on the left is red var text =  
svg.selectAll("text.left") .data(colorScale.domain()) .enter() .append("text") .attr("class", "left")  
.attr("x", 10) .attr("y", height \* 0.20) .style("text-anchor", "end") 2d92ce491b
