It is a privately held, independent company based in the United Kingdom. The company's main headquarters are located in London. Supported OS's Win Network Tools Portable supports the following versions of Windows: Categories Downloads CNET Reviews Reviewed Software Amazon Amazon Shop Join our community to stay up-to-date with our reviews, software recommendations, deals, and more. The present invention relates to a method and apparatus for regulating the airflow of a toilet bowl. More particularly, the invention relates to a method and apparatus for regulating the airflow of a toilet bowl using a hand-operated damper that is adjustable to maintain the air flow as necessary to facilitate urination in order to help prevent blockage of the bowl. The maintenance of a satisfactory flow of air through a toilet bowl is important for proper elimination and hygiene. It is not uncommon for the obstruction of a toilet bowl caused by a blockage of the drain line or the valve or the mixing of fecal material with urine, or the excess buildup of fecal material in the bowl to inhibit the flow of air through the drain system. Such blockages can be caused by silt, hair, skin, toilet paper, or other debris. In the event of a blockage, a clogged toilet bowl may cause an unpleasant and messy situation. Thus, a need exists for an apparatus and method for regulating the flow of air through a toilet bowl in order to facilitate urination. I purchased a used Nikon D7100 with 18-55 VR and 50mm f1.8. I'm having a difficult time with some of the lighting and low light situations. I would like to purchase some high quality flash that would be more effective than the built in flash. Does anyone have any recommendations for a high quality flash? Nikon D7100, 18-55mm cc6f4944dd

KEYMACRO is a scientific macro development environment for WinPE/Win32. It allows developers to build their own development tools, development procedures and environments for their applications. The program supports the following macro programming languages: Basic, Pascal, C, C++, C#, Visual Basic, VB.NET, Visual C++, Delphi, J++, and C/C++/CLI. It also provides a built-in compiler, a debugger, and an object editor for all target development environments (WinPE/Win32). The key features of the program are: • Dynamic project support: * Xilinx or Vivado project support. * Build and debug support for both project types. * Create and load existing project files (xpr and vpr files). * Easy navigation between project files, source, and files in the debugger. • IDE: * Run your project with the IDE, in both WinPE and Win32 modes. * Build your project with the IDE, in WinPE mode. • Built-in emulator and debugger: * Xilinx Vivado or IP Eval simulator support. * Xilinx Alveo debugger support. * Win32 debugging in WinPE mode. * 3K and 1K memory models for Xilinx emulator. * Built-in simulator support for Vivado ERC. • Disassembler and assembler: * Support for Xilinx Lattice ERC. * Built-in support for a Xilinx emulator. • List of Xilinx IP devices and simulator components (no device list support). * High-level programming environment. • Support for C/C++/CLI (C++11) - Xilinx core. • Support for VHDL and Verilog (HDL) - Xilinx core. • User-defined types for an IDE: * High-level programming: * Timer and counter. * Advanced user-defined types. • Projects can be saved in hpp, hs and msl formats. • Source files can be saved in xml, hpp, hs, msl, stp, and cpp formats. • Smart project generation is possible. • Scripting

language support. • Syntax coloring support. • Customizable project editor. • Different target support. • Optional breakpoints. • Automatic detection
