bin files.. So there are two ways to use the new rom.. Read the instructions and do everything the instructions tell you to do.. Tape the new rom in the bin folder of the MAME folder.. If you've got the bin file, you can put it in the bin folder.. If you've got it somewhere else, just copy the file into the bin folder. If you've already got an older version of MAME installed.. Open up MAME, go to ROMs, and open the bin folder. Just tape the new rom in.. and it will work.. If you're not sure which rom to use., It should say in the instructions.. What this does is it allows you to use the new rom without having to reinstall MAME on your computer.. If you don't do it, you will have a problem with new rom... So just go to the bin folder and tape in the new rom you just downloaded.. If you want to do this with a usb key, it's just like inserting a rom, but the usb key is hooked up to your computer.. I know someone who was unable to get the rom to work because he didn't do this.. And I guess they didn't do a correct install. So hopefully this will work for you.. If not, well at least you'll get the instructions. Read them and follow them to the letter.. I recommend you do the usb-thing. If it doesn't work, just rename MAME.txt and restart. Enjoy!!! For Linux only, what this will do is allow you to play the game on your computer.. It won't allow you to save.. And you will need the NDSM3 for Linux to install it. MAME and CPU's ported to Linux with BIN's What this does is allows you to use the Bin file, just like a rom.. Download MAME.bin and ds\_cubetape.bin Extract the MAME.bin file into the bin folder.. Extract the DS\_CUBE\_TAPE.bin file into the bin folder. Go to the bin folder of the MAME folder.. Open up MAME, and goto ROMS. Just tape in the two files you just extracted.. I haven't tried this, but I've seen f3e1b3768e
