This is a "KeyMapping Macro", a tiny little shell script which will work out the target size of the virtual disk and allocate that size to the virtual disk. It will also resize the backing file, if present, and will then run a "vmware-vdiskmanager resize" on the virtual disk. Why? Because, if you're changing the size of your virtual disk image, you're most likely trying to shrink it. However, because you want to resize it to a smaller size, you need to expand the virtual disk first, then shrink it again to the desired size. This is because the size of your virtual disk image is determined by the size of the backing file. If you want to shrink the backing file, you need to shrink the virtual disk image. Sample Usage: Run the program with the following command. `cd /path/to/folder ./vmdisksize --new-vhd --backing-file-path /path/to/image-file.vmdk --new-virtual-disk-size 500gb` Source Code: The VMDiskSize source code is hosted at GitHub. The source code contains all the basic operations needed to resize the backing file, allocate the new virtual disk size and then resize the disk image. Documentation: The included ReadMe file will contain detailed instructions on how to use the application. Quick Start Guide: Download the source code, extract it to your disk and run it. The application will walk you through the process of resizing a VMWare image, expanding the virtual disk image and allocating the new size to the backing file. VMDiskSize.exe Example: Open the exe, navigate to your VMWare disk image and click the "New virtual disk size" button. Some Caveats: The utility only changes the size of the backing file. This means you will not be able to expand the virtual disk image, if it contains snapshots. You cannot specify an allocation more than 128GB in size. VMWare will only let you specify a 128GB allocation size. Skype has decided that the best way to make money is to offer you a limited free version of Skype. The free version will only let you make two free calls and hang out with up to 16 contacts at a time. If you're not paying for the service, then you're a tester and everything will be made easier for
