Teleriscaldamento. GUIDA ALLO STUDIO DEI PROCESSI DI RAFFINAZIONE E PETROLCHIMICI. That \$50.00 to \$55.00/barrel is why an article entitled "The Four Horsemen of the Oil Apocalypse", was published in the UK Mail Online on September 27, 2007, just three days before the US market closed, and two days before the Wall Street open. The article detailed that a new study by the British government's Sustainable Development Commission had said that the world is approaching a 'perfect storm' of worsening energy supplies and increasing demand, and that governments should prepare for an "oil shock" in 2008. The study is said to have been prompted by concern that world oil output is running out of time to meet growing demand from the rapidly expanding economies of China and India, which will drive up consumption by more than a million barrels per day by 2030. Production has also fallen by 1.2 million barrels per day in the past six years because of a sluggish recovery in the North Sea following a surge of investment in the 1980s. According to the study, the world could face the prospect of oil shortages and soaring prices by 2016, unless there is " 2d92ce491b
