Create and edit key-value text macros used to control software behavior. Key:The text that makes up the value of a macro. Modifier:Type of modifier to be applied to a macro. Default value:Default value to be set for the text in the macro. Range:Range of text that is eligible for replacement. Ignore spaces:Whether the text in the macro should be regarded as a single item or as separate words. Options:Options that can be set for a macro. Context:Cells in which the macro can be used. Options:Option menu used to set macro options. Macro name:The name of the macro. Macro definition:The definition of the macro. Macro settings:Settings used to define a macro. Macro:The macro list. Macro:The macro that was just used. Text:Text stored in the macro. Text form:Form of the text in the macro. Macro:Form of the macro. Form:Form in which the text is stored. XOFFSET:Offset in the macro name. RANGE:Name of the range of cells in which the macro can be used. Select range:Whether the range should be selected or not. Context:Cells in which the macro can be used. Context cell:The range of cells in which the macro is active. Select context:Whether the range should be selected or not. Select context cell:Whether the range should be selected or not. [FIGURE 3] 10.3.4.1 Word - Macro Settings After clicking on the Name, Options, Context cell, or Context menu command, the user is able to edit the text value of the macro. The text is editable in different formats, depending on the format used in the macro. 10.3.4.1.1 Word When the macro has a single word as the text value, its form is Word. In this case, when a user uses the command Word, the macro name is updated with the string of text, together with its context cell, and the text value stored in the macro is replaced with the default value. When a user uses the command Word, the macro name is updated with the string of text, together with its context cell, and the text stored in the macro is replaced with the

default value. 10.3.4.1.1
