Run the last command as root . Put the argument of the most recent command in the shell. ssh root@remote.host "rpm -qa" | xargs yum -y install. sh && yum -y update && yum -y install.sh && yum -y update && yum -y install.sh && yum -y update && yum -y install.sh as when running the last command in the list above. If you run the ssh "rpm -qa" command while the last command in the list is being executed, you will receive an error message and all commands will be executed as if the last command were executed in the normal order. If you run ssh command "rpm -qa" fffad4f19a
