National officers are chosen at each fraternity's Annual Conclave. The Conclave convenes each year for approximately two weeks in the fall. Please click on the links below for complete information regarding the national officers to be elected this year.

Molecular cloning and sequence analysis of a mitochondrial 16S ribosomal RNA gene from the tick, *Haemaphysalis longicornis*. To obtain a probe to identify tick mitochondrial 16S ribosomal RNA (mt rRNA) sequences, we cloned and sequenced the mt rRNA gene from *Haemaphysalis longicornis*. The mt rRNA gene of *H. longicornis* was a 1668-bp fragment and encoded a protein of 506 amino acids. The nucleotide sequence (1667 bp) showed a high similarity with those of other Ixodidae, including *Haemaphysalis flava* (99.4%), *Haemaphysalis qinghaiensis* (99.3%), *Ixodes ovatus* (97.6%), and *Ixodes turdus* (97.4%). However, the degree of sequence similarity was lower in the case of *Haemaphysalis kitaokai* (97.3%). Within the 16S rRNA gene of *H. longicornis*, there were 11 variable regions, which were nucleotides 130 to 140 (5'-CCA-3' and 5'-GAG-3'), 141 to 144 (5'-CGA-3' and 5'-GAG-3'), 204 to 207 (5'-CGG-3' and 5'-TGG-3'), 259 to 262 (5'-CCG-3' and 5'-TCG-3'), 265 to 268 (5'-CGG-3' and 5'-GGA-3'), 270 to 275 (5'-CGC-3' and 5'-GCG-3'), 341 to 347 (5'-CCT-3' and 5'-CCA
