Pieter Corneliszoon Hooft Pieter Corneliszoon Hooft (; 17 May 1684 – 19 May 1771) was a Dutch physician and chemist, known for his research into reactions involving metal salts, the formation of salts from acids and bases, as well as hydrochloric acid and its compounds. He was one of the first to identify, describe and study the chemical reaction of ammonium bicarbonate with hydrogen peroxide. Biography Pieter Corneliszoon Hooft was born on 17 May 1684 in Alkmaar. He was the son of Corneliszoon Hooft, a chemist who also taught at the Alkmaar Academy, and Marjolijn Hooft (née Beyers), a physician. In 1710 Hooft completed his studies at the medical school in Leiden, and in 1719 he became a licentiate. The following year, he earned his doctorate at the University of Utrecht, where he had to defend a thesis called 'Vernovingerde malen en nieren'. His thesis advisor was Pieter van Gent. After earning his degree, Hooft became a professor of pharmacology and chemistry at the pharmacy college of the Leiden Medical School. In 1725 he became a member of the Royal Society of Sciences in Copenhagen. In 1724, he became a full member of the Academia Naturae Curiosorum in Amsterdam, where he founded the Chemical Society of the Netherlands. Research Hooft's research focussed on the properties of metals and their compounds. He was an early researcher into chemical reactions involving metal salts, and one of the first to describe the solubility of gold and silver in nitric acid. He described the reactions of hydrogen peroxide with ammonium bicarbonate, and he identified this reaction as a process of hydrolysis. He also investigated the extraction of alkali metals from their salts. Hooft also researched nit
