Definition Rootkits are pieces of malicious software that has been designed to alter the behavior of a computer system. They modify or replace system files, add, remove, rename or relocate the original files,

and then "jiggle" the altered files so that they appear to be the original ones; typically, the modifications are not noticeable to the user. In addition, the rootkit can often hide the malicious nature of the program that created it; it can make it appear as if

another program or routine is malfunctioning or that user settings have been altered. Another "doubling-up" effect of the cybercafé is that the behavioral changes that it induces in your children--the use of the Internet--indeed, the digital technology

itself--present a true
"speed bump" for most,
because they are so
hardwired to "real-world"
things, and
