You work with the most powerful search engine in the world, where there is no need for third-party search solutions and their occasional bugs. The engine is reliable and free, and there is nothing like it in the world. Why spend the time, money, and efforts required to set up another search engine when there is Google, the best one? Google also supports a wide range of programming languages and is the only search engine that takes its mission of saving the world into account. Google itself is based on the foundation of the open source project called the Sphinx project. It allows you to manage your searches and show the results in the user's language, and there are no surprises about its quality. The most important programming language is used by millions of developers around the world. Learning how to program in Ruby is easy and practical, so even a beginner can master the language in a short time. Installing the toolset There are no other prerequisite software or tools to get started. To get started, you need to download and install the Ruby interpreter. You can choose the Ruby interpreter that you want, but installing the Ruby version 1.8.7 is recommended. The installation is done via the executable file. Use the Ruby installation methods When you have the required tools installed, you can start experimenting with the language. You can write different Ruby programs, choose the Ruby interpreter's syntax, and work on different text editors. Eclipse IDE is a very popular and convenient development environment that works in any environment and any operating system.
