Platforms: *nix Easy e-mail client is a text based simple email client. It features a simple front-end to send and 1a22cd4221

The Commodore 64 version of the GOAT is a midi instrument tracker and sequencer for the Commodore 64. Goat was designed with simplicity in mind and because we want to share with the world of music what we have created over the last couple of years. We have been developing this project over the last few years from 2007, when the first beta versions were released, through to today where we are releasing a final version. Although the C64 version is not the one that is out there for download for everyone, it

is still a powerful and sound instrument tracker. We put a lot of heart and soul into this project and also put a lot of effort into making it stable and of high quality. The C64 version has been available since 2008 and is available for free download. You can download the 'goat-c64' project files in zip format. Features: The C64 version of the GOAT supports HardSID and CatWeasel midi devices, with the possibility of creating a custom device by using an external driver. You can create sounds from multiple sources, either built-in audio sources (such as ULA, SRAM, etc) or external sources

(such as RSI MIDI, and the like). You can create and save sounds, instruments and compositions, and edit instruments and sounds. GoatTracker uses the reSID library by Dag Lem.

GoatTracker Features:

- Record midi from any audio source
- Fully editable track
- Edit tracks at any time
- User interface inspired by xACT
- Synthesize midi from the internal hardware devices
- Record from the hardware devices
- Edit instrument patches in real time
- Load and save instruments from and to SD card
- Playback midi recorded from an external source
- Load instruments and

sounds from the SD card - Mix and export to the SD card - Export to Midi sequencer formats - Ability to save custom instruments and sounds - Clean and 'realistic' sound - Fully customizable options, useful for mixing your creations - Multiple ways to browse your patches and instruments - Work with hard coded waveforms and simple waveforms - Easy to add and edit sounds - Able to edit instrument sounds, MIDI notes, instruments, and patches - Up to 3 save slots - Currently compatible with PC DOS and Commodore 64 GoatTracker

Requirements: - A Commodore 64 - A

ZS-1 (or similar) Midi Interface to be

What's New in the GoatTracker?

GoatTracker is a handy, easy to use, simple tool specially designed to help you create Commodore 64 music. Uses reSID library by Dag Lem and supports alternatively HardSID & CatWeasel devices. GoatTracker is for creating music for this particular platform. Many people will have basic knowledge about how to write a tune for a computer. But the last hurdle is to transfer the music to the media and to the terminal emulator program you

are going to use. That's where GoatTracker comes to your rescue. The only thing you need to do is to choose which device (reSID & CatWeasel) is going to be used for generating the sound and then set the appropriate instrument to play. Now select the "Music" or "Melody" option and select the song you are going to make. You have to select the "Use Up" option so the recorded file will be outputted from your PC. After the whole process is done, you just press the "Start" button and wait for the final result. The music is now ready to be played on your Commodore 64.

Enjoy! Latest GoatTracker

Downloads: Version 0.17.0: - ReSID support added (the ability to play tunes which uses reSID).- The "detune" parameter can be set in the control panel.- New instruments added: bass, drums, horn, organ, piano and vocals.- The instrument volume is now stored in the final file.- New support for WaveBurner 3 and MediaStation 2 audio cards.- Better handling of the metadata

Version 0.16.0: - ReSID support added (the ability to play tunes which uses reSID).- Ability to "detune" instruments (increases or decreases the frequency, depending on

the setting).- New instruments added: brass, hand percussion, harp, marimba and xylophone.- New support for VFM2, Wavestar, VFP, Wavestar Plus, WaveBurner 3 and MediaStation 2 audio cards.- Improved support for WaveBurner 3 and MediaStation 2 audio cards.- The metadata field is now stored in the final file, making it compatible with the new v2.30 format.

Version 0.15.0: - Added support for SoftSynth and Tom-CatWeasel devices. Version 0.14.0: - Added sample editing.- Improved instrument tunings.- Added support for Chiptune Tunes.- Improved organization of

MIDI data. Version 0.13.0: - Improved compatibility with some audio cards.- Added support for SoftSynth and Tom-CatWeasel devices.- Added support for the AY-3-8910 audio chip.- Improved samples and instruments tuning. Version 0.12.0: - Improved compatibility with some audio cards. Version 0.11.0: - Improved
