One of the things I look for when creating new materials is simplicity, without compromise. I think it applies to most industries, but we are always looking at the content and the value of the article. Especially so with the internet and the increased curiosity about what companies are doing behind the scenes. If a material is simple, it is an easy read, with more questions raised in the mind of the reader (your customer). One of the things that I find that helps to add to the simplicity of a material is the use of proper headlines. For example, in the new TechBytes: The Year of Data Exhaustion, it highlights three things: “The Number of Data Exhaustions Has Exceeded That for Which We Are Adapted”, “Why the Exhaustion of Data is a Business Risk”, and “The Data Management Paradox: Data Exhaustion vs. Increasing Data Volume” I have long recommended that original source material is the key component of a piece. I believe that the original material has the best chance to be “simple”, without compromise. If you are a business owner or business owner-like, you recognize that most of the time it is really easy to find the same article, on a website that has more of a sales-focus, than giving the reader a true inside look into your business. As a marketing agency, we use some of the older TechBytes as promotional material for key events. We just used a screen shot of the article and highlighted the headlines. It certainly gets the message across!U.S. Attorney Preet Bharara said Tuesday he found his own handling of the case "questionable." Bharara is a former assistant U.

But it could have. During the 1980s Iraq repeatedly threatened to launch a nuclear strike against the United States. Saddam Hussein had, according to his own intelligence services, more than 200 atomic weapons, and he longed for a nuclear-tipped missile to launch against America's 658 nuclear weapons in Alaska, California and the continental U.S. But Saddam's arch-nemesis for 30 years -- the United States -- did all in its power to ensure he never got his weapons. Saddam's Iraq had harbored three of the bombers that attacked America on 9/11. The U.S. was told to leave the country in 1991 when he invaded Kuwait. And though there has been a long-standing, on-again, off-again resolution to depose Saddam, the United States and its allies have tolerated his rule and supported his troops and intelligence services, which have conducted acts of sabotage against U.S. aircraft and ships on countless occasions in a campaign of terror -- the bombing of the USS Stark in the Persian Gulf, the killing of U.S. troops during the 1988 Anfal campaign, the bombing of the U.N. headquarters during the Gulf War, the car bombing of the U.S. Embassy in April 1992, the assassination of Blackwater security contractor Nicholas Quinn, the killing of U.S. soldiers and diplomat Barry Schweid in the January 1996 shooting, the bombing of the U.S. intelligence compound in Baghdad the following July, the car bombing of the U.S. Embassy in October 1997, the kidnapping of U.S. soldiers in October 1998, the November 1997 assassination of William Cowan, an American diplomat who had defected to Iraq and was suspected of involvement in the shooting of Blackwater guards in Baghdad, the 2000 bombing of the U.S. Consulate in Karachi, Pakistan, the murders of Jamal Brown and Nicholas Berg, of the U.S. Embassy in Nairobi, the 2000 bombing of the Israeli Embassy in Buenos Aires, and the attacks against the USS Cole in Yemen and in Saudi Arabia in August 2000. Moreover, according to a UN report in November 2002, Saddam's regime worked with al-Qaida to bring down a U.S
