the only country in the world that does not have a national prescription drug policy, thus allowing each state to determine its own policy. Though no state has yet to adopt the Controlled Substances Act (CSA) model for drug abuse treatment, New York State has established a comprehensive drug abuse treatment system using this model since 2001. Under the CSA model, drug abuse treatment is incorporated into the criminal justice system with three major components: (1) drug-involved offenders are identified, arrested and prosecuted through the criminal justice system; (2) prison inmates are identified and referred

to drug abuse treatment based on the risk of drug abuse recidivism; and (3) drug abuse treatment is provided to inmates and their communities upon their release from prison. In this special issue of the Journal of Addictive Diseases (JAD), we provide an overview of the current New York State drug abuse treatment system.

Nitrosative stress in diabetes mellitus. Insulin resistance and diabetes mellitus (DM) have been associated with abnormalities in nitric oxide (NO) production. Nitrosative stress, a major contributor to the development of diabetes, can be defined as a state of high levels of

reactive nitrogen species (RNS) such as peroxynitrite (ONOO-), nitrite (NO₂-), and nitrate (NO₃-). The role of RNS in the pathogenesis of diabetes was first reported in studies of chemical-induced insulin resistance in rats. Subsequently, NOX2 oxidase-
