
Cma-data-format-excel

Download

cma-data-format-excel (in Excel 2007) how to select data format and paste it as column (not row) format in C#? I would like to be able to do this with C# in order to use it with Visual Studio 2010 The default format for CSV data is "CSV (values <<as they come) per line". So this has to be done in C#. I don't know

how to convert value to
column (row) in Excel.
Perhaps using the
"CSVToExcel" function? I
don't know how to do it in C#.
I hope someone can help
