AIML Bot is an Open Source chat bot that allows you to talk with a wide variety of chatbots, including the popular ALICE bot. These chat bots have been programmed to mimic real people, so in some cases, you may need to train the bot to understand what you mean. Some bots will ask you a question, and the answer will be returned as plain text. Some bots have specific knowledge of a topic, and you can ask them to perform a task or look up some information. Using AIML Bot: To use AIML Bot, you will need a web hosting account, and a valid Yahoo! Widget Engine account. Also, a valid Yahoo! Widget Engine account is required to

configure your web server to allow users to use your hosted widgets. You will also need the AIML Bot hosted at with the directory named as "aimlbot-bot", or a copy of the source code. If you need instructions, see here: The TiddlyWiki Forums have a number of threads discussing the benefits and limitations of using AIML Bot: Note that the AIML Bot has been a very popular bot for several years, and is well known to the community, but it has not been updated since 2006.
