What's New In?

1. Audio Measurement System is quite easy to use. Just plug-and-play. 2.There is a DSP part included which can help you measure Frequency, Phase, Gain and other characteristics, not only with the built-in spectrum analyzer. 3. You can synchronize the measurement with the sound card and save the measurement trace. 4. Measurement of one sample can be continued with one click when use the Audio On-Off button. 5. No

matter how complex the sound sources are, you can always measure the waveform of them. 6. The Fourier Spectrum is generated and overlaid on the waveform of sound sources. 7.You can see the amplitude and phase response of the microphone and speaker under the same condition. 8. There are two display modes: Direct Display mode and Indirect Display mode 9. Periodic or Continuous sweep mode, and frequency range is up to two-million Hertz, in the case of continuous sweep mode, an infinite number of peaks can be shown. 10. The output frequency is set to be 2Hz, 10Hz, 100Hz, or 1kHz. 11. Fast and Slow Repeats mode and Continuous mode. 12. FFT and High Frequency Cut off are available. 13. Black and White, Green and Yellow, Red and Blue are available for color display. 14. The measurement period is adjustable from 1ms to 1000s. 15.
