Where You Go When you travel, you get more than just a ticket for a flight. You're traveling through a physical space where you are at the mercy of others. Through this space, you pass into your own pocket universe. You can bring with you what you like and take away what you wish. You're the captain of your own destiny. But before you begin your journey, you need to get ready. You need to change and bring with you what you need for your trip. You may wish to bring your own company. You may wish to bring a companion. You may wish to bring your computer. You may wish to bring a camera. You may wish to bring a pen and paper. You may wish to bring a book, a tablet, or a new cell phone. You may wish to bring a printout of your database to remind yourself of the route you've previously traveled. You may wish to bring your medicine for your trip. You may wish to bring your favorite soup. You may wish to bring a toy. You may wish to bring a parent, spouse, or friend, because you will need them when you get home. We hope this book will help you as you prepare to bring your journey. See the full description at wikipedia.org. Where You Go is a GPS-based travel guide for walking, running, bicycling, walking, skating, and more. In addition to routing, the app includes a range of information about many destinations and modes of transportation, including Wikipedia articles for each destination. Where You Go Features: * Customizable info about your destination * Lists of addresses, and directions * Spatial data such as elevation and speed * Wikipedia articles * Google maps support (Street View, elevation, speed, etc.) * Search for points of interest and Wikipedia articles * Comprehensive list of routes (previously published and custom) * Custom distance and pace alerts * Group navigation by distance and pace * Gives the option of navigating with a treadmill or a bike * Navigate with one or more route or share your route to find out the route for other travel app users * Compatible with most any modern smartphone or tablet * Option to add your favorite Wikipedia articles, which will be displayed as they are updated * Works on WiFi and cellular networks * Compatible with Apple and Android operating systems * Comes with detailed user manual * Translations available in over 22 languages * A

The KEYMACRO (Keyboard Macro) is a method for notetaking, similar to the Notepad++ IDE. But instead of having text files, it runs directly in your Windows clipboard. So, when you select text and press a hotkey like CTRL+SPACEBAR, you will find the contents of your clipboard in a new window. This tool is really useful for writing notes while you are working on other applications. When you press the hotkey the text will be copied to your clipboard, allowing you to paste it into your editor or into the keyboard using the CTRL+V shortcut. LATEST IMPROVEMENTS: 1) The module is now able to work with Word files. 2) The program now saves current settings in case the computer is shut down unexpectedly. 3) The module now uses the correct path to the executable. 4) The screen res is now correct. 5) German translation added. 6) The program now starts minimized in the system tray. 7) The program now shows the user what hotkey was pressed. 8) Some more entries added. 9) The program now shows the program version number. 10) Several minor bugs have been fixed. NOTE: The performance is now improved. ScreenSaver and Wallpaper for PC / Ipod, Tablet or Smartphone. Easy to customize the time. No installation. Double click the downloaded file and Double click run Click "Change" button to change the Time by clicking on the button'month' or 'week' on the top menu. When you open the application, the current time is automatically set to the time you selected. After closing the application, the selected time will be set again to the default time. The option to set the time according to the longitude and latitude of your location. ScreenSaver and Wallpaper for Ipod, Tablet or Smartphone. Easy to customize the time. No installation. After closing the application, the selected time will be set again to the default time. The option to set the time according to the longitude and latitude of your location. ScreenSaver and Wallpaper for 80eaf3aba8

Lunar Tracker is a free download astrology software application designed for Astrologists, Students and anyone who wants to get a complete overview of the moon activity. It is able to fetch a full report on lunar phases, moon age, solunar angle, new / full moon details, as well as dates for the future equinox and solstice, using the current date as reference. The application does not require installation, and can be run as is, as soon as you've decompressed the download archive. As far as appearance is concerned, Lunar Tracker adopts a simple GUI, with very few commands encased in a single menu. Most of the main window is reserved for the report, which is retrieved as soon as you launch it. The program automatically detects your time zone and the local time, but not your current location. Instead, you will have to manually specify your whereabouts using a dedicated dialog. The report includes a generous array of details related to moon activity, such as age of the moon, its phase, lunar day, moon distance, day length (for your current location), last new moon date, last and first quarter, fool moon and next new moon information, as well as when the next equinox and solstice will occur. Also, there are two interesting functions, namely Fast Forward and Super Fast Forward, which allow you to travel in the future (if we may say that), so as to view the moon evolution for the next days. All in all, Lunar Tracker is a user-oriented application that can give you a full overview on the moon activity. On the downside, there's no possibility to save the report. Lunar Tracker Website: Copyright 2016, All Rights Reserved Lunar Navigation and tracking is the activity of finding and determining the current position of the Moon. The Moon is used to determine the current position of the Sun or the other planets. Lunar Navigation is mainly used by people in Maritime navigation. A moonrise, the lunar disk becoming visible in the morning sky, is one of the most wonderful sights that Earth offers. No sky offers such celestial harmony. The Moon, as the vast hemisphere of land it's nearly always on, is a kind of theatre and laboratory for the solar system. Lunar Navigation is the science of making use of this planet's only

What's New In Lunar Tracker?

Lunar Tracker is a tool designed for astrologers, students and anybody interested in the moon activity. Lunar Tracker lets you get all information regarding the activity of the moon. Lunar Tracker fetches a report on the moon activity for any date using your current location as reference. The application does not require installation, and can be run as is, after decompressing the download archive. Main window is reserved for the report, which is retrieved as soon as you launch it. The program automatically detects your time zone and the local time, but not your current location. Instead, you will have to manually specify your whereabouts using a dedicated dialog. The report includes a generous array of details related to moon activity, such as moon age, its phase, lunar day, moon distance, day length (for your current location), last new moon date, last and first quarter, fool moon and next new moon information, as well as when the next equinox and solstice will occur.
