on tech company culture, posted at [Clofibrate-induced increase in cytochrome P-450 in extrahepatic tissue. Clofibrate, an effective hypolipidemic agent, is known to stimulate the synthesis of hepatic cytochrome P-450. To determine whether this induction also occurs in extrahepatic tissues, rats were given 10 mg/kg body weight of clofibrate daily for 15 days. Clofibrate increased the microsomal protein content in both kidneys and lungs, and induced a 9-fold increase in cytochrome P-450 in the kidney microsomes. The rate of $^{14}\text{CO}_2$ incorporation from $[1-^{14}\text{C}]$ laurate into ^{14}C -labeled metabolites was also enhanced in the kidney microsomes from clofibrate-treated rats. This effect was associated with a parallel increase in the activity of laurate omega-hydroxylase in kidney microsomes from treated animals. The activity of both the laurate omega-hydroxylase and other activities was not increased in the kidney microsomes from rats treated with clofibrate for 3 days, suggesting a threshold effect on the induction of cytochrome P-450

by clofibrate. These results suggest that clofibrate-induced increase in cytochrome P-450 may be a common response in extrahepatic tissues. Solenoid valves are widely used in a variety of applications, such as, for example, as metering and actuating devices in industrial process automation. Typically, a solenoid valve comprises a solenoid and an armature
