child's lifetime the environment around them will evolve. They will adapt and with them will come new ideas and innovations. Some will become familiar and some will become a bit less familiar. The environment will change constantly and the child will adapt and grow with it. The world is often a frightening place and children are no exception. They need to learn to cope with it. This is not always easy. Being in fear is often more powerful than truth. It's understandable and even healthy. As parents, how do we teach our children
