In this mode, BizTalk Control Center performs all steps of the deployment process. After saving the current configuration, you can apply the new configuration by selecting this mode. Apply: This mode is used to apply a new configuration, for example, when the component is moved from one location to another or new properties are added. Edit: This mode allows you to modify the current configuration and to save the changes made. Deployment wizard BizTalk Control Center Description: Creating an environment for a solution is the first step of deploying the solution Note: Starting from version 1.0.1, the Online Help is disabled and the documentation is in the "Help file" menu. The wizard is a handy tool for creating environments for solutions that use BizTalk. At the first page of the wizard, you have to choose whether the wizard should create a new environment or take an existing one as a basis for a new solution. In the latter case, you have to select the environment that you want to use as a basis for the new solution. After you select a basis environment, you have to fill in the required information on the next pages. The wizard uses a predefined structure of environment parameters, and you can create an environment

BizTalk Control Center
