WirelessKeyView Comments WirelessKeyView is a freeware and it is useful if you want to find a saved password you once used to connect your notebook to a wireless network. Unlike most of its competitors, WirelessKeyView is as powerful as it is simple to use. It is probably the best solution for those who like to keep portable solutions at their fingertips. It works on Windows XP, Vista, 7 and 8 and it only requires a shortcut on your desktop. WirelessKeyView WirelessKeyView - quite simple to use in order to recover a lost network password My first impression is that WirelessKeyView is not the most elegant tool. It doesn't require an installation and it only requires a shortcut on your desktop and probably this is due to the fact that it is very similar to the Recover a Password... tool from SysInfoTools and as this one is included on a CD. The tool is based on the concept of a Wi-Fi Key. This is an internal data generated by your network card in order to create a secure connection. It is then stored on your hard drive for those cases in which you have to use it again. The good thing is that this key is unique and not easily guessable, this is the reason you can use WirelessKeyView to recover a lost password. As you start the application, you can use the context menu to select the network or the drive where you want to search for it. Once you have selected the path, you will be presented with a table with the information related to the network and with a list of currently saved Wi-Fi keys. You can select one of them, type the password and click the 'Recover' button. The program will start a scan of your partitions and will save the result in a TXT file. After that, it is time for you to open the file on your computer and you will be able to see all the key typed by WirelessKeyView. WirelessKeyView has some very useful options that enable you to save the key in a TXT file, which is the default format. You can also save the results in HEX, ASCII, or POLY ; last option is not available on the trial version.1. Field of the Invention The present invention relates to a method for
