two people who were not in the corporation Salaries paid at the BBC have been frozen for the next three years, in a move expected to save £150m. The corporation says there is no budget for new pay rises at the BBC's 10 regions, which include the BBC's radio and television services. There was also no increase in the BBC's basic salary, which is used to cover pensions and benefits. But the corporation said it expected annual growth in salary costs of

---

1.4% from 2015-16. The BBC Trust, the governing body of the BBC, said the freeze was a "proportionate response to the current circumstances", and said the corporation was "committed to reducing future costs". The BBC Board of Directors said: "This represents the first time the BBC's salary costs have been frozen since 2007/08 and, in the long term, is part of a 10-year plan to reduce costs and simplify the BBC's governance structure." It added

---

that BBC Wales was set to contribute £1.9m, BBC Scotland £9.7m and BBC Northern Ireland £6.4m towards the £150m cost of the freeze.

'Shock and dismay' While the main BBC Trust said in a statement that it believed the action would "protect the BBC's future", the acting BBC Trust chair Dame Jo Armstrong said it was a "difficult day" for those in the "BBC family". She said the freeze was intended to give the trust and the Trust Board time to

analyze your hard disk drive anytime. Can be used on all Windows versions from XP up to Windows 8. How to Clean the Memory? Windows 7, Windows 8, and Windows 10 Memory

One of the most common errors experienced by Windows users is running out of available space on your hard drive. This is usually caused by either running out of available space or by programs that open or open a lot of files without closing them. To clean out your hard drive,

---

you must run a disk cleanup utility, which will remove the files that are taking up space. When your computer is running out of memory, the system starts to slow down and the computer becomes unresponsive. There are 2 ways to clean the memory: Method 1: Disk Cleanup tool: One way is to use a disk cleanup tool. Disk cleanup tools are free software designed to clean out the memory and your hard drive. The Disk Cleanup tools do this by scanning your

---

hard drive for files that have not been opened for a long time. The disk cleanup tools only scan files that have not been opened in a very long time. If you go to the "C:\Windows\Temp" directory, you will see that many of your temporary files have not been opened since the last time you ran Windows. These are the folders and sub-folders to delete: %AppData%\Microsoft\Windows\Temp%AppData%\Local\Temp%AppData%\Roaming\Microsoft\Windows\Temp%Tem

---

p% Method 2: Memory Fixing Kit: The other way to clean up the memory is to use Memory Fixing Kit. Memory Fixing Kit is a freeware utility for restoring your computer's memory, which are used to store all your data. The Memory Fixing Kit finds out what programs are taking up all the space and fixes them.

Running on Windows 8 and 10: If your computer is running Windows 8 or 10, use the Disk Cleanup tool to remove the temporary files from the

---

following folder:  
%AppData%\Local\

What's New in the?

Make your hard drive look as clean and fast as new by using the best Windows PC cleaning program! There are hardly any other software for Windows that can be so effective. After using Little Disk Cleaner you will never want to use another. It will make your computer look brand new and will boost the performance of your computer too. The Clean

---

Program By Windows is designed to safely remove temporary internet files, junk files, cache files, as well as unneeded registry entries and fix problems that may occur on your computer. It can be used as a powerful Registry Cleaner, a Cache Cleaner and a Junk File Cleaner, which makes it the most effective Windows PC cleaning software available today. With an active Internet connection, your hard disk drive is constantly used to write and

---

read files in order for you to have preferred content load fast. However, this and other activities you perform can leave a lot of undesired and useless files behind that can one day fill up disk space. In this regard, Little Disk Cleaner wants to help you out with a bit of cleaning. Check for requirements and offers Before you get to enjoy all the application has to offer you need to make it functional, meaning install it on your computer. Just make sure to

---

carefully read all offers or you can end up with other third-party programs installed as well. Apart from those, your PC needs to be fitted with .NET Framework, which is usually bundled up in latest Windows iterations, but you can also select it from the installer. With the application up and running you can take a bit of time to go through what it has to offer, although it's not a difficult task to figure out from the name. Junk and temporary files are the main concern, but

---

the options menu gives you the possibility to choose the directories to include and exclude from the process, as well as the types of file to look up. Built-in scheduler for more flexibility The application can only target your local, fixed disk drive, so if you plug in an USB Flash drive it won't work. In any case, the core function is to keep your system intact. Needless to say that hitting Scan Disk puts the process in motion, following any rules you

---

might have changed in the options menu. Scanning doesn't take too long, but this depends on the number of selected search areas. A list shows all files as name and extension, with sadly no other corresponding details. What you can view, on the other hand, are the generic file properties, which are brought up at the press of a button. You can choose to have the files removed without your consent, moved in the recycle bin, or placed in a special folder

---

in case some analysis needs to be done. Moreover, there's a built-in scheduler that lets you configure recursive scan and
