##_**Photography Programs**_ Because photography is so integral to the branding of your business, it pays to spend a little time understanding the tools to best work with various types of photos. Your photo needs will dictate which program you choose. Of course, to get the job done, you'll need to learn about your camera's operating system. What operating system is installed on the camera? When you're designing your photo album, you may be tempted to just use one software package. If so, don't. You may want to create one album for the audience that sees your photos online, and another to finish the project.

What is a Photoshop File Type? A Photoshop file is an object used in Adobe Photoshop. It is usually a raster image or vector graphic and is saved in either .psd or .psdx format. Photoshop File Type Photoshop Files are stored in a relative location within your computer's default saving folder, usually "C:\Users\Your Name\My Documents\Adobe Photoshop\Typed Files." Photoshop File Type. A Photoshop File Type contains a file header that describes the content of the file and some properties about the file itself. If you use Photoshop for editing and storing images, you can use a File Type that assigns a general purpose for images in the folder. The Photoshop File Type stores the filename in the upper left corner of the file. A common example of a file type is Photoshop Image (psd). This file type has a specific purpose and functions as a placeholder file when you start to create an image in Photoshop. Once you create an image, you can save it with the file name that's associated with the file type. This is an easy way to organize your images. Use the H icon () to open Photoshop Preferences. Locate the File Types icon () to open the Photoshop File Types dialog box. Photoshop File Type Information The properties of a Photoshop File Type start with a string of letters. The Adobe Photoshop Typed File Type is seen as PSD, but could also be seen as PSDx. In this tutorial we will use PSD and PSDx interchangeably. The Photoshop File Type is usually first set to Default Photoshop PSD in File Types settings. You can always change this if you want to use a different File Type. The following Photoshop File Types settings are available in File Types: Photoshop File Types are used to store your images inside Photoshop. You use Photoshop File Types to preserve the file and its Properties. Some File Types are used for specific functions, such as creating, modifying, or sharing images. Use the H icon () to open Photoshop Preferences. Locate the File Types icon () to open the Photoshop File Types dialog box. The following Photoshop File Types settings are available in File Types: The File Type name cannot be changed if the File Type was created with Photoshop CS4 or Photoshop CS5.
