Assam-Calcu allows the user to add new function-keys to the existing command-menu by defining it in the following form: 'Find' followed by the function-key 'c' and 'Replace' followed by 'n' or another function-key. For example: 'Find' 'e' c 'Replace' 'n', which will add the new command 'Find (e)' to the original command 'Find (e)'. The command 'Find (e)' will now become a function-key. In case of the following form, the previous functionality will be lost: 'Find (e)'; 'Replace' 'n', since 'Replace (n)' refers to the variable 'n' of 'Replace (n)'. In this way, Assam-Calcu may be used as a desktop calculator, which is easy to manipulate. Assam-Calcu supports all basic numbers as well as decimals and fractions. Also, the symbols '(' and ')' can be added to numbers, equations or expressions. It is very easy to write thousands of mathematical command-lines (e.g., 'Answer = 673 245') and store them in Assam-Calcu, of which the copy of the most recent thousands can be shown at any time by executing the command 'Session Report'. The app lets you choose a certain search term, so you can quickly replace all instances of the selected phrase with a text of your own choice. The best part of the Find and Replace Description is its speed. According to the developer, it has been built so that you can just start typing and the app will detect the difference and replace the first occurrence with the entered text. That said, Find and Replace Description only supports common words and phrases, so you may get some ugly strings. In order to solve this problem, the developer also offers its users the chance to define a list of keywords that are allowed; it can be easily generated using Microsoft Word (other documents available for this feature are also accepted). In addition to the default text replacement, you can also extend it and find a different phrase by typing it in another field. If you manage to collect a list of special or uncommon phrases and words, the app can most probably help you come across those items (either in text, web pages or documents). All in all, Find and Replace Description has many useful options; it is not only a simple yet powerful text editor, but can also be used to replace some words or phrases.
