I know answer to this question is no way but I just want to understand how to get 4 corners and write my hexagonal shape. A: You can find a library that does that here. You could also use a set of orthogonal functions, see: Or another way would be to find the coordinates of the vertex positions and then use the given angle and the Pythagorean theorem The NFL, in the midst of a terrible offense blocking season, has decided to reduce offensive player grading in the preseason, according to Bob McManaman of ESPN. The league will no longer provide weekly individual grades on players nor will they be updated during the regular season. If a player receives a weekly grade of 88 or higher, it will be released. If a player's grade falls between 89 and 77.9, it will be updated after the game. According to McManaman, this change will be in effect for the rest of the preseason. Grading in the preseason tends to be very volatile and the process does not provide enough clarity or reliability, according to the NFL, which currently has a dead-last offense blocking league. The lack of clarity, however, does not mean NFL teams are not paying attention to the offensive line, which has been a revolving door of overpaid free agents and unproven rookies. Players are also graded by position, while individual grades are provided by position.
