The Freecom Turbo USB 2.0 Crack Mac functionality is a hot new feature, that is now supported on Freecom hard drives. The Turbo USB 2.0 feature allows a drive to transfer data over USB 2.0, at a higher rate than USB 1.1 allows. A USB 2.0 port offers a maximum data transfer rate of 480Mb/s (8000kbps), whereas a USB 1.1 port can only transfer data at about 1.1Mb/s (120kbps). The technology is commonly used in external hard drives, for transferring data over longer distances. If you haven't been given a Freecom Turbo USB 2.0 feature, you can use the application to install it. Your hard drive may have come with the drive operating at a rate of 480Mb/s, and the software can be used to upgrade it to a maximum rate of 800Mb/s (120kbps).
