

Q: Join t-SNE results on to spatial graph - make sure clusters are adjacent I am trying to join the t-SNE plots from individual runs on each figure to create a spatial network using Pygal, however I am unsure of how to ensure that the points belonging to the same cluster are adjacent to one another. I found this but it hasn't worked, is there a better way to do this? A: Here's a way to find the 'adjacent' points in your t-SNE results. Note that this may result in points that should be in adjacent clusters being split over two clusters:- # assuming a t-SNE object on which you'd like to add points import random import pyspark.sql.functions as F # remove any t-SNE dimensions that aren't equal to 2 sne_tsne = F.explode(F.tsne(x, 2))[0] sne_tsne = F.withColumn(sne_tsne, F.col('x')) # add a new column with randomly selected unique ids sne_tsne['point_id'] = F.rdd.mapPartitions(lambda iter: random.sample(iter, 1)).toDF() # now add points to this new point column: sne_tsne.join(sne_tsne['point_id']).select(sne_tsne.col('x')).collect().toDF() Q: the numbering for counters in bibliography This is my MWE \documentclass[12pt]{article} \usepackage[a4paper]{geometry} \usepackage{enumerate} \usepackage{refcount} \begin{document} \bibliographystyle{apalike} \bibliography{example} \end{document} as for the reference list, it is ok. but the numbering for the enumeration in the bibliography is not very friendly. Can any one give me some advices? A: You can adjust the bibliography, and get the bibliography in the normal style you want by adding the following before \bibliography{example} \setcounter{refs}{section}{chapter} Q:
