Requirements: PC with a Windows operating system Notebook supported by the application Operating system compatible with the program Summary: HP MediaSmart MVP Software Serial Key is the perfect companion for any notebook owner who enjoys listening to music, viewing videos, and taking photos on the go. It will make dealing with all your media files a breeze and will also facilitate their organization. Does it do everything? Yes. It does everything you'd expect it to do. Your files are organized using categories. You can view your music, videos, or photos in Windows Explorer. You can create a playlist for whatever media you're listening to. You can play one media file while you're listening to another. You can preview the media file before you import it. You can even search through the music or the video or the photos you have. You can even use all three together if you have the right software installed. How fast is it? This is where the application really does come in handy. It will give you access to your files in a matter of seconds. No need to import them first, the application will do all the work for you. All you have to do is select which kind of media you'd like to access. You'll be prompted to select the music, the videos, or the photos you want. If you have no idea where to find the file you want, you can use the search engine which is pretty convenient and will lead you to the media that you want. How well is it? The application works well and looks great, but this is where things get a bit more complex. There's a few areas that need improvement. The biggest one is that you can't add or remove any songs from the database. It's a known bug that you can't import new music. You have the option to import music, but you're really only importing the album itself. You won't be able to import the individual songs in the album. You can also add music that's not in the database, but it's also not possible to remove it. That being said, if you need to do just that, you can always download the files manually.
