Want to know how to install apps on Samsung's latest Galaxy phones? Check this guide out. There are plenty of different smartphone operating systems out there, but Android is what you'll be using most of the time. It's the most popular mobile OS, and is often the one people turn to when they're looking for a smartphone that suits their needs. As we all know, smartphones aren't just used to make calls and send text messages. They have become full-on cameras, music players, and everything else you can possibly need out of a mobile device. But even when they're all you want a smartphone to be, sometimes you just need to open the phone and use it as a feature phone. Here are some of the most common needs that feature phones can fulfil. And, if your phone is running Android, the Samsung Galaxy J1 is a great option for your needs. The Samsung Galaxy J1 has a 3,000mAh battery, which is more than most smartphones have, including the Samsung Galaxy S8. It doesn't have the fastest charging rate in the world, however, so you'll have to charge it overnight to give it a good long-lasting charge. Unlike some Android smartphones, the Samsung Galaxy J1 doesn't have a fingerprint sensor built in. It does come with Android 7.0 (Nougat), which is pretty up-to-date, but there's nothing stopping you from upgrading it to Android Oreo.
