AutoCAD is used in a number of industries and for a variety of projects, including architecture, engineering, survey, mapping, industrial design, landscaping, photography, as well as traditional engineering drafting. AutoCAD is similar in operation to a drafting table, providing users with the basic tools and features of a drafting toolset with the ability to create documents directly on-screen. These documents can be viewed on an electronic whiteboard, which is an output method similar to that of a document camera. A typical AutoCAD system allows users to work on the project directly on-screen. AutoCAD 2015 was released in 2015 and the 2019 release is called AutoCAD 365. AutoCAD does not support its own scripting language, Autodesk Revit does this with AS4. AutoCAD can be used to create model-driven websites and mobile apps with the UI development environment called AXIOM. AutoCAD Architectural Template (AT) The AutoCAD Architectural Template or AT is a library of building information models (BIM) that can be used in AutoCAD architectural, engineering, and construction products. In addition to the architectural templates that accompany the package, the AT provides building information models for the various types of architectural design work: AutoCAD Architectural (AT AutoCAD) The AutoCAD Architectural (AT AutoCAD) template package is designed for architectural projects. The AT contains building information models for the major types of architectural projects: AutoCAD Civil 3D (AT Civil 3D) The AutoCAD Civil 3D (AT Civil 3D) package is designed for civil engineering projects. The AT includes building information models for the following types of civil engineering projects: AutoCAD Electrical (AT Electrical) The AutoCAD Electrical (AT Electrical) package is designed for electrical engineering projects. The AT includes building information models for the following types of electrical engineering projects: AutoCAD Mechanical (AT Mechanical) The AutoCAD Mechanical (AT Mechanical) package is designed for mechanical engineering projects. The AT includes building information models for the following types of mechanical engineering projects: Usage of the package Installation of the AutoCAD Architectural (AT AutoCAD) template package consists of creating one or more AutoCAD drawings (called Templates) and a drawing that can be loaded as a Template and used in other drawings (called Child). Installation is achieved by creating the following: A drawing called New Drawing, which is the first drawing created. One or more drawings called Templates, which are AutoCAD drawings that are to become templates. A drawing called Template, which is the AutoCAD drawing that will be loaded as a template in other

drawings. A folder called Templates, which will hold the created drawings. The template package is installed by creating: One or more drawings called Templates, which are AutoCAD drawings that are to become templates.
