Portable I.Disk Crack+ With Keygen Free Download For Windows

i.Disk is a free disk space analyser which can be used as a replacement for the standard disk usage analyzer "Disk Usage Analyzer". It's a great replacement because it can do not only the standard "Disk Usage Analyzer" tasks but also other tasks, like the DOS "dir" command. The directory tree shows the disk space usage on the left and the files and directories on the right. You can also add, rename or delete files. It's also possible to compare two directory trees. Requirements: It works on Windows 95/98/ME/NT/2000/XP, Windows 2000 Server, Windows NT Server 4.0 and later. i.Disk can use 6+ GB of RAM for large directories. It also supports 64 bit versions of Windows. i.Disk can be used as a replacement of the DOS "dir" command, or you can make it call the DOS "dir" command. i.Disk can display file and directory information in a tree format. i.Disk can filter the file and directory information. i.Disk can use the file properties of DOS and the Windows properties, like extensions or hidden files. i.Disk can also display a list of the files with their file size and date information. i.Disk can display a list of the directories and their sizes, dates and created date. i.Disk can display the total size of a directory and all its subdirectories. i.Disk can show a summary of the disk space usage on the selected directory. i.Disk can show the size and date of each file in the selected directory and all its subdirectories. i.Disk can compare two directory trees. The following commands can be used to get information about the selected file, directory, or folder. When using Portable i.Disk you can access the subdirectories by pressing CTRL and use the menu to drag and drop the subdirectories to the desired location on your computer. You can change the name and create new subfolders as needed. While you are in the parent directory you can also see your currently viewed files and folders as a tree. You can also use the on screen keyboard to type in directory names. i.Disk will highlight the subdirectory you are typing in and you can double click it to open the selected folder or you can type in the subdirectory's name using the onscreen keyboard. If you type an asterisk (*) or a space in your name, i.Disk will automatically select all the subdirectories below the name you have typed in. Portable i.Disk automatically stores the list of recently used folders. If you click on "Show all folders" you can see them. There are two lists of recently used folders. The first list shows folders as they are in the currently displayed folder. The second list shows folders as they were the last time you used Portable i.Disk. To search the list of recently used folders simply type in your name using the onscreen keyboard and select the folders to display. If you press the UP arrow key while viewing the list of recently used folders, i.Disk will scroll up through the list of recently used folders. Pressing the DOWN arrow key will scroll down through the list. There is a small "Search" button on the toolbar to quickly search the list of recently used folders. If you select a folder by pressing and holding the CTRL key while selecting it, the folder's name is highlighted. Pressing ENTER will open the folder. Portable i.Disk also has many other features, some of which are explained below. Delete files with portable i.Disk To delete files with Portable i.Disk, you can: Press Enter to delete a single file Hold CTRL while pressing Enter to select multiple files in one operation and then delete them Press Shift and Enter to delete the parent directory and all files and subdirectories Press Ctrl and Enter to select a subdirectory and its children and then delete them Hold the CTRL key down and press and release the SHIFT key to select files and folders with wildcards. Designed to assist you in finding files and folders that take up large amounts of space on your internal disk drive. Also designed to provide the capability to interactively access and modify some system settings. This file searching application does not "lock-up" your system while it searches for files and folders. For your convenience this software includes the functionality to alert you via a dialog box when a large file is detected. You can then either delete the file yourself or the application will do this for you when you select the appropriate option. The program will also give you the opportunity to remove any files that are not relevant to your current operation. This application allows you to select the type of file you wish to search for: -images -text files -sound files -video files -other files -a folder -system settings This application also includes a very powerful search history that will recall previously searched files and folders for a quick reference to them. i.Disk can be installed on any partition that is not the bootloader partition.
