PiQtire aims at a streamlined
approach to capturing
screenshots on Windows 10. It's

highly efficient, and it tends to work even in the most demanding of situations (like during heavy gaming). It has no UI whatsoever, and only one feature is available (that's the ability to create a short cut on the desktop for future access).

PiQture Version: PiQture

Features: Unfortunately, it

doesn't provide any specific features per se. PiQtore is an adequate utility for quickly taking that screenshot and for storing them later. Features: PiQtore itself has no UI whatsoever. It takes the entire area of the desktop and can capture fullscreen screenshots by default. What's more, it allows you to

capture the screenshot and save it with a unique name. You can later grab it with a shortcut you've created. You can also set the app as the default OS screenshotting utility. It takes screenshots in lossless quality. There are several other things, but you can check them out for yourself if you'd like. What

PiQtore doesn't include: You can't make individual regions or window screenshots (it captures the entire area of your desktop), and the app doesn't allow you to create multiple screenshots for storing them later. There are no other, advanced features that PiQtore doesn't pack. Since there is no UI, you can't enable

PiQture's disable interface sounds feature. You must ensure that PiQture is available in your environment. You can download PiQture for free here.

you want the latest version, the Windows Store is the only option.

All you have to do is paste the following code in the shortcut's

properties: Name: PiQtire

%PROGRAMFILES%\ PiQtire\

And voilà, you're all set. This will

initiate the installation of

PiQtire.sketchpad at installation.

PiQture is a fast, handy and most importantly, free alternative to Snipping Tool. It uses the next generation Web technologies, and therefore will not use any of the system resources, does not install anything on your computer, and is able to capture

only a single screenshot.
Screenshot tool that supports
only a single screenshot: The
application is able to capture only
one screenshot at a time, which
makes it a bit annoying if you're
looking for a tool that may help
you capture multiple
screenshots. But, since PiQtore
is a free app, and is also much

faster than the web-based alternatives that can provide multiple results, we think it's a worthy addition. Screenshots taken using PiQture are saved by default in the same directory that the utility resides in, but you may use the application's context menu and go for a new option by hitting the Save Path button. The

app is able to save images to anywhere on your hard drive, and you can also capture them as JPEG or PNG images. The best part of PiQtire is its simplicity and its technical prowess in the backend. The application's user interface is clean and simple, and the technology that lies behind

PiQtore makes it work flawlessly.
PiQtore Timings: The screenshot tool requires a 1.3MB file. On my system it took around 0.2 seconds to take a screenshot. A: Desktop recorder: Using the free (no ads), Windows 10 app ShowRecorder, you can record the whole screen, the whole desktop or a single window. You

can then save the recording as a MP4/WMV and share as video file via Twitter, YouTube, Facebook or Skype.

ShowRecorder is a general recording tool as well as a screen recorder. Many people may suggest an alternative GUI based screen recording software. While the need to capture the whole

screen is time consuming, some of these GUI based apps can achieve that. But unlike ShowRecorder, they limit the recording region. External apps: Other options include: Screenshot capture apps: Besides Paint, there are many screenshot capture apps on the market. But all of them are

designed to capture the whole screen. And some require admin rights. Paw: Paw is a simple photo editor and screenshot capture app for Windows. Winner:

What's New In?

PiQtore is a simple screenshot taking tool which offers a direct

shortcut to capture the image of whatever you want. Free, lightweight and easy to use with intuitive interface. It is very easy to use even for beginners!

Screenshots: Capture the whole screen, window, region or even a selected area. Select for example the last location where you saw the page, article or file you want

to save and the filename will be automatically appended as
[PageName]_[ScreenName],
[WindowName]_[RegionName]
or [AreaName]_[ImageName].
