Interpreter AutoCAD has the ability to run Python scripts. AutoCAD commands are handled through an interpreter called dwgApi. Each command is associated with a Python file that can contain Python code, comments and the execution of AutoCAD commands. Command execution is handled by Python object method calls on dwgApi. dwgApi makes available all Python commands documented in the dwgApi class. Follow the wizard to install Autodesk AutoCAD (both online and offline installation) and activate it. After the installation is finished, check your Autodesk folder. There will be a.NET\Bin folder within it. Here you will find the AutoCAD.NET Runtime. Use the 2.0 runtime that's installed by Autodesk and not the pre-installed 1.2 one. Click File > Build | Edit Post-Build Event. Type in a name for this batch file. Give it the command set "ProcessorArchitecture = x86". Double-click the batch file and follow the wizard. Click the OK button when it asks for a path to your EXE and everything is ready. Run the batch file by double-clicking the file. Now start Autodesk AutoCAD. The main window will open and show the splash screen. Type in "%Program Files (x86)\Microsoft Visual Studio\2017\Community\Common7\IDE\bin\amd64\cad.exe" and press enter. If the following dialog comes up, click OK. The autocad.net runtime, should appear in the dialog. Press the right mouse button on the.NET Runtime and select "Executable". Press OK. Confirm the autocad configuration by pressing OK. Now you should be able to start the autocad editor. If there are no issues it should now open. Edit: One problem with the post above is the reference for the.NET version for AutoCAD. Q: Scala: How to read a file containing unicode characters into an array?
