What's New in the?

This program does exactly what it says - it unzips archives without any user interaction.

AutoUnZip automatically detects the files in the archive and can unzip them to any directory. The program can also extract archives directly to a temporary directory so that the files can be

easily moved to the desired destination. The program supports ZIP archives of most popular file formats, including ZIP, RAR, BZIP2, TAR, GZIP, and TXT. If you are using a newer file format, AutoUnZip can recognize it and automatically extract. The program offers a convenient GUI interface to make it easy to use. You can change the settings on-the-fly, add and remove archives and filters to include or exclude specific

archives. AutoUnZip supports downloading file lists from the Internet to create the archives. AutoUnZip's archive extraction speed is significantly faster than any other unzipper. AutoUnZip is light on system resources and does not significantly slow down your computer when extracting and compressing files. As you might expect from the name, the program is completely free.
