Windows 7 is by far the most secure operating system out there. If you do a search online, you will find a wide range of reasons why it is the best OS of all times. But what is so special about it? Let's find out. The Start Button By default, Windows 7 has the start button in the upper left corner of the desktop.

The Start Menu is like an application launcher that stores all the shortcuts that you use every day. You can get to it from anywhere. Whether it is a browser or email client, you can easily jump into the program you need to use. Clicking the start button also opens the menu that contains the standard programs that you use on a daily basis, so it's not too hard to find your preferred games, web browsers, and music players. The Tile Program in Windows 7 The start menu has become more than a launcher for all your applications. With the tile program, you can access any programs you need from the start menu. Clicking the tile to open a program will automatically open it in the program that you have associated with it. Windows 7 or Windows 8: What is the best OS for you? First of all, Windows 7 is available in two flavors: 32-bit and 64-bit. There are a lot of advantages to the 64-bit operating system over the 32-bit. The 64-bit operating system can read more memory. This is a very important factor because as your programs grow in size, so does your operating system. For example, a program that can run in a 64-bit OS will need 16GB of memory. This is a lot of

memory, but with a 32-bit version, your program will only need 8GB. A 32-bit version of the operating system can only use 4GB of memory. The 64-bit operating system is what the Windows 8 operating system is based on, so if you run 32-bit Windows 7 you will be able to run the Windows 8 programs. The best OS to use is the 64-bit, but the most popular operating system is the 32-bit. Windows 8 can run on the 64-bit, but is not as good as Windows 7 because it is not as advanced. If you are going to use Windows 8, you should use the 32-bit version. If you are using Windows 7, you should use the 64-bit version. To find out which version of Windows 7 you have, click Start and
