Convert Unicode to ML is a simple and lightweight application that was designed with a single goal in mind: to help users convert Unicode Malayalam fonts to ISM ML fonts. You can either install it on your computer, or run the portable file. If you opt for the portable version, it is important to mention that the program doesn't leave any traces in the Windows Registry, and you can copy it on any USB flash drive or other devices, and take it with you whenever you need to carry out the conversion process. It sports a plain interface that appeals even to less experienced users. The main window is divided into two panes: the left one allows you to input the desired text, while the second provides quick access to the converted font. Basically, it's extremely easy to work with this tool, as there aren't any configuration settings available. Once you have entered the Unicode text in the dedicated dialog, with a simple click on the "Convert" button, the application will quickly display the converted text. The generated text cannot be exported to a file, but it can be copied to the Clipboard, and this way you can embed words or phrases with ISM ML fonts into any other third-party applications. During our testing we have noticed that the program is able to carry out the conversion process very quickly and without errors throughout the entire process. As it would be expected from such a small utility, it also manages to remain light on the system resources, so it doesn't affect the overall performance of the computer. All things considered, ISM ML proves to be a simple software solution that helps users convert Unicode Malayalam fonts to ISM ML fonts quickly. Although, it cannot be considered the most powerful tool on the market, it does what it says, and thanks to its overall simplicity, even rookies can master this tool.
