PEMC PEMC is a trademark for a type of pneumatic control used to operate solid-state relays (the pneumatic/electric/electronic control), a technique for electrically switching solid-state relays. All solid-state relays use pneumatic switches to actuate the relay contacts. The pneumatic actuation method is widely used throughout the electronics industry, including automotive and aerospace. It has a long history in aircraft and aerospace applications, used in thousands of devices and systems. Originally pneumatics was the standard for electrical control of solid-state relays, but its efficiency and reliability have declined as electrical switches gained in reliability. Some of the early use of the terms PEMC and PEMC-relays was by General Electric (see page 1 of this article). Instead of using a single solenoid as a driver, as was the original use of the PEMC technique, instead the entire pneumatic air supply is regulated by a high voltage amplifier such that each solid state relay is always powered to its supply voltage, no matter how far it is away. History The use of pneumatic switches for electrical contacts was described in a patent in 1942, and practical production began later in the 1950s. Initially, the principal controlling devices used in aircraft avionics were fabricated by the so-called PEMC work-groups, of which many were located
