of selected antimicrobial activity of essential oils obtained from a dominant genus of medicinal plants (Ziziphora) growing wild in Egypt. The use of essential oils (EOs) has long been recognized as a potential complementary and alternative therapy for the treatment of several disorders. The present study was carried out to evaluate the antimicrobial activities of EOs obtained from the aerial parts of a dominant plant species, Ziziphora species (also known as Lavandula, as well as Lavandula), grown wild in Egypt. VOCs (volatile organic compounds) of the selected EOs were extracted by hydrodistillation and analyzed by gas chromatography-mass spectrometry (GC-MS). The different extracts were tested for their antimicrobial activities against eight bacterial and fungal strains. EOs obtained from the leaves of Ziziphora areophthalmus, Ziziphora persica, and Ziziphora vulcanica showed significant inhibitory activity against Salmonella enteritidis, Bacillus cereus, and Pseudomonas aeruginosa. Only the EO obtained from the leaves of Ziziphora persica exhibited mild antifungal activity against Candida albicans. Phytochemical analysis showed the presence of significant amounts of oxygenated monoterpenes and monoterpene hydrocarbons. The total content of identified compounds was in the range of 13.98-57.52% in the EOs obtained from the leaves of Ziziphora species. The antimicrobial activities of the EOs from the leaves of Ziziphora species could be attributed to the presence of the identified constituents.Q: Eclipse, Tomcat 7, Java 6 I can't figure out why my project won't start when I have java version 1.6.0.
