IrcA Service Crack Download Latest

IrcA Service is an application which manages an IRC channel and keep connected while your computer logged off. It's very easy to use and has a lot of new features. IrcA

Service Description: This is a TService application which uses connection to keep connected while your computer is idle. When the computer is logged in, IrcA service is closed and IrcAClient application starts to use this connection. I will update IrcA client with plugin and support for IrcA service. When you connect your computer to the network, IrcA service will be open and IrcA client will work on this connection. If your computer is disconnected from the network, IrcA service will close and IrcA client will start to work on local connection. IrcA service works fine with dnet and mirc. If your computer uses any other connection, IrcA will try to use this connection. If IrcA can't connect to this connection, IrcA service will start to use local connection. IrcA service works fine with aircrack (a way to connect to IRC channel using hex edit) and other clients, it does not depend of this client. If you change to other client, IrcA service will work with this new client. **Key Features:** ☑ stay connected while your computer is logged off ☑ disconnect from IRC network and reconnect ☑ reconnect when your

computer connected to network ☐ reconnect every 15 second ☐ reconnect when network connection was lost or has problem ☐ reconnect from auto kill. ☐ reconnect from auto join ☐ reconnect on disconnection ☐ asynchronous message sending ☐ keep logs to database ☐ auto start ☐ free ☐ very easy to use ☐ multi connection ☐ multi language ☐ no need to run a full IRC client ☐ stays in memory until it's unload dll ☐ no need to add a dll to my setup ☐ some new features ☐ not depend of your IRC client ☐ multiple connection with same ip ☐ multi language ☐ not depend of your IRC client ☐ multiple connection with same ip ☐ multiple connection with same port ☐ multi language ☐ not depend of your IRC client ☐ multi connection with same port ☐ multi connection with same channel ☐ can be included in auto run

What's New in the IrcA Service?

This is IRCA service for Delphi The service connect on startup and stay connect while your computer in log-off. When you log-off your computer, your bot (irc-bot) will continue to work. If your bot have a static ip adress, you dont need to rejoin to server when you rejoin. Once you can't connect to your bot, it will reconnect to the server. Your bot will also receive all the messages you send. You can also use it to add new users to a IRC bot. You can also use it to send message from a script. (Such as maybe "Enter:" or "Exit:", or "Enter #channel:") You can also configure the bot to be some sort of IRC bouncer, This will allow you to "mask" and password protect your bot. You can use the service to kick all or some users of a IRC bot. So you can kick all users of a specific channel, or kick all users of a specific user, or only the user with a specific nick. This allow you to ban a lot of people at once. There is also an events to know if

you bot is kiked or kkicked. Also a event to know when a user join or leave a channel. You can also get informations on all the users and channels your bot are logged. This service can also be used to send messages to your own script. (Basically, any programing language can use this service) Just write "sender("+sender_ip+")" in your script to send it. You can use the service to make automatic scans of channel. (For example, if you need to scan for black lists) But you must have an IRC user with the same nickname as the script. And remember you need to send the DLL or script executable to the irc-bot to start. But you can put the executable in your plugin folder in
