Happy Rocking!Prognostic value of coronary computed tomography angiography in patients with coronary artery disease. This study sought to determine the prognostic value of coronary computed tomography angiography (CCTA) in comparison to stress echocardiography (SE) in patients with coronary artery disease (CAD). Patients with suspected CAD were categorized as having or not having CAD. CCTA and SE was performed, and the presence of CAD was documented on both modalities. Patients were followed-up for the combined endpoint of all-cause mortality, nonfatal myocardial infarction, and hospitalization for chronic heart failure. Patients without CAD on both modalities had a significantly lower event rate in comparison to patients with CAD on CCTA and SE (27.3% vs 66.6%; P 09e8f5149f
